

Camp Desk — Croatia SaaS Strategy

Feature ROI, pricing, and go-to-market for a Croatia-first indie SaaS
Prepared July 2026 · Market: Croatia / Adriatic · Model: real side-business / indie SaaS

Core insight. Two Croatian regulations turn "nice-to-have" features into **legally-forced demand** — the best kind for a paid SaaS. **(1) eVisitor:** every accommodation provider must register every guest and remit tourist tax; painful, manual by default, has an official API. **(2) Fiscalization 2.0:** mandatory B2B e-invoicing from Jan 1 2026 (VAT-registered) and Jan 1 2027 for non-VAT *paušalni obrt* renters — the bulk of the market. Your new multi-vertical onboarding (camps + apartments/rooms) widens the addressable market from ~800 campsites to the 90,000+ private renters facing the same pain.

1 · Highest-ROI features, ranked

Ranked by **value ÷ effort** for this specific market.

#	Feature	Value	Effort	Why / monetization
1	eVisitor registration + tourist-tax auto-calc	Very high	High	The killer wedge — legally mandatory, universally hated. Justifies a paid tier on its own. Gate behind Pro .
2	iCal channel sync (Airbnb / Booking.com)	High	Medium	Prevents double-bookings (the #1 fear). iCal is the 80/20 vs. a full channel manager. Pro .
3	Occupancy & revenue analytics	Med-high	Low	You already hold the data. Cheapest way to make Pro feel worth €25. Quick win.
4	Automated confirmations & reminders	Medium	Low-med	Retention + professionalism. Starter/Pro .
5	Payments/deposits + fiscalized invoicing	High	High (regulated)	Big Business-tier lever; forced by Fiscalization 2.0. Partner with a fiscalization API — don't build compliance.
6	Guest-facing direct booking page	Medium	Med-high	Commission-free appeal, but most already live on OTAs. Do after eVisitor + iCal.
7	Staff logins / multi-user	Med (camps)	Medium	Camps have reception staff. Auth seam already reserved. Pro/Business .

Do only one thing next: eVisitor. It's the difference between "a nicer spreadsheet" and "software I'm legally obligated to want." ⚠️ Verify eVisitor API access terms first — it may require registering as an approved integrator with per-provider credentials. Validate feasibility *before* promising it on a pricing page.

2 · Pricing

EUR. Most renters are non-VAT *paušalni*, so display gross. Annual ≈ 2 months free.

Plan	Monthly	Annual	For whom	Key gates
Free	€0	—	Trial / tiny hosts	1 property, ≤15 units, calendar + bookings, HR/EN. Funnel only.
Starter	€9	€90	Solo apartment / small host	Unlimited units, all views, CSV/PDF export, tourist-tax calc, reminders.
Pro ★	€25	€250	Serious hosts & small camps	eVisitor auto-sync, iCal channel sync, analytics, up to 3 properties, staff logins.
Business	€59	€590	Multi-property / camps	Unlimited properties, payments/deposits, fiscalized invoicing, priority support.

Rationale. Rentlio (main Croatian competitor, Zadar) and check-in tools sit at €25–40+/property. Position *below* them as the simple, affordable board with eVisitor built in — and lean into your genuine niche edge: the **parcel + midday-turnover model** apartment-centric PMSs handle poorly. Pro at €25 is the profit center; eVisitor is the reason people climb from Free/Starter to Pro.

3 · Seasonality — the thing that will actually hurt you

Customers earn Apr–Oct and go quiet Nov–Mar. Naïve monthly billing = brutal off-season churn.

- **Push annual, billed pre-season (Feb–Apr).** Target >50% of revenue on annual — smooths cash and locks retention through dead months.
- Offer an explicit **"off-season pause"** (freeze billing Nov–Mar) as a retention valve instead of cancellation.
- Time the biggest marketing spend for **Jan–March**, when owners plan and set up for the season.

4 · Go-to-market (Croatia-specific, low cash / high time)

- **Facebook groups** — "Privatni iznajmljivači Hrvatske" and regional renter groups are extremely active and word-of-mouth-driven. Be genuinely helpful (answer eVisitor questions), don't spam.
- **Partnerships** — Kamping Udruženje Hrvatske (camp association) and local *turističke zajednice*, who onboard renters to eVisitor and are a natural referral channel.
- **SEO content in Croatian** targeting pain queries: "kako prijaviti goste eVisitor", "kalendar rezervacija za kamp", "tablica rezervacija apartmani", "fiskalizacija 2.0 iznajmljivači".
- **Cold outreach** to campsites (scrape Google Maps / Booking listings) — a smaller, reachable, underserved list vs. the 90k renters.
- **Referral discount** — one free month per referred paying camp; this crowd talks constantly.

5 · Financial model (solo, part-time, realistic)

Blended ARPU ~€18/mo, ~3–5% free→paid, low cash CAC (mostly time), ~24-mo customer life.

Stage	Paying customers	MRR	ARR
Year 1 — post-eVisitor launch, pre-season push	40–80	€720–1,440	~€9k–17k
Year 2 — word of mouth + fiscalization tailwind	150–300	€2.7k–5.4k	~€32k–65k

- **LTV** $\approx €18 \times 24 \approx \text{€430}$ against near-zero cash CAC — economics work *if* you find customers efficiently. The GTM grind is the real constraint, not margins.
- Consider **skipping the free tier at launch** in favor of a 14-day trial + direct sales; add Free later once eVisitor is your magnet.

6 · How billing should land in the code

- Add **Subscription / plan on Camp** (+ trialEndsAt, Stripe customer/subscription ids).
- Gate features in **lib/data.ts and middleware** — don't scatter plan checks through components.
- **Stripe Checkout + webhooks** for subscription lifecycle (EUR, Croatian cards / SEPA).
- For fiscalization/invoicing, **integrate a Croatian fiscalization provider's API** rather than implementing EN 16931 + tax-authority reporting yourself.
- Multi-user, when needed: a **User table with campId FK**, moving email/passwordHash off Camp — the swap the auth seam was designed for.

7 · Suggested sequencing

- **Now → 4 weeks:** billing scaffolding (Stripe + plan on Camp + gating rails). Nothing gated yet.
- **Pre-season (validate eVisitor API access first!):** eVisitor sync + tourist-tax calc + iCal import/export + analytics → **launch Pro**. The money release.
- **Mid-season → next off-season:** payments/deposits + fiscalized invoicing → **Business tier** (ahead of the 2027 paušalni deadline).
- **Later:** guest-facing direct booking, staff roles, full channel manager.

8 · Biggest risks

- **eVisitor API access** may be gated to approved integrators — verify before marketing it.
- **Incumbents** (Rentlio, Chekin) already do eVisitor. Win on simplicity + price + the camp/parcel/turnover niche they under-serve.
- **Fiscalization is regulated** — partner, don't build.
- **Seasonality** — annual billing is non-negotiable for survival.
